# Neo2 Tastaturlayout

Christoph Pratl, Lukas Prokop  
2019/04/27 11:00, #glt19

# whoami

- **Lukas Prokop**  
self-employed software developer  
math student  
introduced to Neo2 in 2011
- **Christoph Pratl**  
math student  
introduced to Neo2 in 2018

# History of keyboard layouts

# QWERTY

~ ,	!	@	#	\$	%	^	&	*	(	)	-	+	← Backspace
Tab ↔	Q	W	E	R	T	Y	U	I	O	P	{	}	
Caps Lock ↑	A	S	D	F	G	H	J	K	L	:	"	↵ Enter	
Shift ↑	Z	X	C	V	B	N	M	<	>	?	Shift ↑		
Ctrl	Win Key	Alt								Alt	Win Key	Menu	Ctrl

# QWERTZ

° ^	! 1	" 2 2	§ 3 3	\$ 4	% 5	& 6	/ 7	{ 8	[ 9	] 0	} B	? \ `	←
↵	Q @	W	E €	R	T	Z	U	I	O	P	Ü	* + ~	↵
⇩	A	S	D	F	G	H	J	K	L	Ö	Ä	' #	↵
⇧	> < 	Y	X	C	V	B	N	M μ	; ,	: .	- _	⇧	
Strg	(Win)	Alt							Alt Gr	(Win)	(Menu)	Strg	

# Dvorak

## Goals:

- 1) Hands should alternate
- 2) Frequent letters in baseline
- 3) Rare letters in bottom line
- 4) Right hand more active
- 5) Digraphs on non-adjacent keys

# Other ergonomic layouts

# Xubuntu, keyboard settings

The image shows two side-by-side windows from the Xubuntu desktop environment. The left window is titled "Keyboard" and contains settings for keyboard behavior, application shortcuts, and layout. The right window is titled "Keyboard layout selection" and shows a list of available keyboard layouts and variants.

**Keyboard window:**

- Behavior:  Use system defaults
- Keyboard model: Generic 105-key PC (intl.)
- Change layout option: -
- Compose key: -
- Keyboard layout table:

Layout	Variant
German	German (Neo 2)
German	German (dead acute)
English (US)	

**Keyboard layout selection window:**

- German
  - German (dead acute)
  - German (dead grave acute)
  - German (dead tilde)
  - German (Dvorak)
  - German (Macintosh)
  - German (Macintosh, no dead keys)
  - German (Neo 2)
  - German (no dead keys)
  - German (QWERTY)
  - German (T3)
  - German (with Sun dead keys)
- Lower Sorbian
- Lower Sorbian (QWERTZ)
- Romanian (Germany)
- Romanian (Germany, no dead keys)
- Russian (Germany, phonetic)
- Turkish (Germany)

# Linux keyboard configuration

- .XCompose
  - X11 defines a Compose key
  - XCompose defines Compose + key combinations
- .Xmodmap
  - Defines how X11 interprets key presses
  - Neo2 configuration on [github](#) exists

# Linux issues

- $\text{U+00AD}$  [layer 3] is written, but has no semantics
- Not written [layer 6]:
  - -- SOFT HYPHEN (U+00AD)
  - $\exists$  THERE EXISTS (U+2203)
  - $\Omega$  GREEK CAPITAL LETTER OMEGA (U+03A9)
  - $\times$  MULTIPLICATION SIGN (U+00D7)
  - $\nabla$  NABLA (U+2207)
  - $\Sigma$  GREEK CAPITAL LETTER SIGMA (U+03A3)

# Linux issues

- Sublime text
  - Does not recognize keyboard layout switch as long as focused
- i3wm cursor keys
  - Layer 4 cursor cannot be used to switch focus
  - Cursor keys must be used

# Windows installation, since XP

Approach: kdbneo2

- 1) Execute `reg_backup.bat`
- 2) Copy `kdbneo2.dll` to `C:\Windows\System32`
- 3) Execute `kdbneo2_install.reg`
- 4) Control Panel, Region and Language, Languages, Details. 'Installed Services', Add, Input method 'Deutsch (Deutschland)', Keyboard layout 'Neo 2.0 ergonomisch'
- 5) Copy AutoHotKey script to Autostart

<http://web.archive.org/web/20190125204303/http://wiki.neo-layout.org/wiki/Neo%20unter%20Windows%20einrichten/kdbneo>

Other approach: pure AutoHotKey script

# Windows issues: kdbneo

- Compose 🎵 key & Layer 4 lock with Shift broken
- Microsoft apps (Kalender, Mail, Store, OneNote) do not support Neo (layers 3+). AHK script keys work though.
- Tablet-Modus: on-screen keyboard crashes if Neo2 is active. Reboot required. Deprecated `osk.exe` works though
- Rare but random switches between Neo2 and QWERTY (second configured keyboard)

# Windows issues: Autohotkey (AHK)

- High latency in programs like cmd.exe
- Autostart programs are not executed as Administrator (“Run as Administrator..”) → AHK not executed

# Neo2 layout

# Layer 1

- baseline with vowels
- j quite separate
- Mod keys to switch layers
- Combining characters on every layer

# Layer 2

- Capital ß (in contrast to ß)
- Locked modes for Layer 2 & 4
- Locked mode is capitals only
- - (layer 1), – (layer 2, bottom), — (layer 2, top)

# Layer 3

# Layer 4

# Layer 5

- Greek position  $\cong$  Latin position if first letter match
- All Greek lowercase letters, incl. variants  $\varsigma$ ,  $\rho$ ,  $\epsilon$ ,  $\phi$ ,  $\vartheta$ ,  $\nu$
- NON-BREAKING HYPHEN, NO-BREAK SPACE

# Layer 6

- Common uppercase Greek characters: ΓΔΘΛΞΠΣΦΨΩ  
missing: ΑΒΕΖΗΙΚΜΝΟΡΤΥΧ
- Technical/math symbols: ∇∃⊂∪∩ non-Greek: ∂
- Arrows → ⇔⇒ ⇨ missing: ← ⇐
- Aikidō

# Lukas' experience report

# Lukas' experience report

- **Motivation:** ergonomic, more characters
- Neo2 over Dvorak
- Timeline:
  - 2009: QWERTZ → QWERTY
  - 2011/12 winter: Neo2 😬
- **Approach:** KTouch, printed layout

# KTouch

The screenshot shows the KTouch application window. At the top, a status bar indicates "Training session started. Time begins running with the first keystroke." Below this are three performance metrics:

- Elapsed time:** 00:00.0 (with a circular gauge showing 0 minutes)
- Characters per Mi...:** 0 (with a gauge showing 0/360)
- Accuracy:** 100.0% (with a gauge showing 100%)

The main area displays the text "Neue Buchstaben: x und q" followed by two lines of practice text: "|uuu üüü uuu xxx uüu uxu üüü xux uuu xxx uuu xxx ddd jjj ddd" and "qqq djd dqd jdj qdq ddd qqq ddd qqq ece ala ivi uxu uxu uxu".

At the bottom, a virtual keyboard is shown with various keys highlighted in different colors. The system tray at the very bottom shows the time as 15:42.

- Achievements:
  - Email: Oct 2018
  - Chat: Dec 2018
  - Lecture: Feb 2019
- Pure muscle memory skill
- Shortcuts are terrible
- Speed (w/o results so far)
- Community very small (reddit?)

# Our experience

- Hard/dedicated switch to Neo2
- After few-characters exercises, write common words early/soon!

# Klavaro

Klavaro - Fluidity

Other texts | Paragraphs 3 - + Accuracy typing with sensible paragraphs.

Tens of thousands of customers have spent four days cut off from, or with little access to, their e-mail accounts after a suspected spam attack. The problem affected a company which processes messages delivered through that platform. All legitimate e-mails were held back when the "large" attack began on Tuesday evening so the spam could be removed. E-mails were gradually being delivered now the fault was cleared, he added. He said these messages should now have been available but access via webmail may have been taking longer to restore.

Then it was the traditional stock-up trip to Woodman's, which I do partly because some of what I buy I can get there for about half what it costs elsewhere, some of it I can't find other places (what is the deal with dill weed in Madison? it's out of stock almost everywhere I go!), and some of it is so hefty I'm much happier buying it when I have a car to haul it in. All told, I

cleared, he added. He said these messages should now have been available but 🦉
